

CLEAN AIR | CLEANER TOMORROW

BIO SCRUBBER SYSTEM

LNS-SC-BIO

Industrial Gas Cleaning & Biological Odour Control

The LNS-SC-BIO is a high-performance bio-scrubber system designed to remove odorous compounds and soluble VOCs from industrial process gases using a combination of scrubbing and biological degradation, delivering cleaner air and a more sustainable future.

Biological treatment for odour and soluble VOC control

Reliable continuous operation

Corrosion-resistant design

Low chemical consumption

Integrated recirculation and dosing system

Sustainable air-cleaning technology

PROCESS GAS INLET FROM SOURCE

CLEAN GAS TO STACK

INDUSTRIAL AIR POLLUTION CONTROL SOLUTIONS

FOR A CLEANER HEALTHIER PLANET

TYPICAL APPLICATIONS

Wastewater Treatment

Food Processing & Rendering

Chemical & Pharmaceutical Plants

Composting & Waste Handling

Pulp & Paper

Fermentation / Biogas / Process Odour Control

HOW IT WORKS

Contaminated gas enters the scrubber

Pollutants are absorbed into the recirculating liquid

Microorganisms degrade soluble contaminants in the biological media

Cleaned gas exits after mist elimination

PROVEN TECHNOLOGY. CLEANER AIR. A HEALTHIER TOMORROW.

Cleaner Air. Healthier Industry.
Greener Tomorrow.
