Cleaner
Planet*

FLUE GAS DESULFURIZATION SYSTEM

LNS-SC-FGD

Wet Limestone Scrubbing
for SO₂ Emission Control

CLEAN
INDUSTRY
BRIGHTER
TOMORROW

FLUE GAS
INLET

CLEAN GAS
TO STACK

SUSTAINABLE
SOLUTIONS
FOR A
CLEANER WORLD

High SO₂
removal
efficiency

Wet limestone-
gypsum
process

Dedicated
oxidation
air system

Absorber
recirculation and
mist elimination

Gypsum bleed
and dewatering
compatibility

PLC / DCS
integrated
control philosophy

APPLICATIONS

Power Generation

Utility Boilers

Refineries & Petrochemical Plants

Cement & Mineral Processing

Industrial Furnaces

Waste-to-Energy / Incineration

PROCESS SUMMARY

Flue gas
enters the
absorber

Sulfur dioxide
is absorbed by
limestone slurry

Oxidation
converts sulfate
to gypsum

Cleaned gas
exits to stack
after mist
elimination

PROVEN TECHNOLOGY. CLEANER AIR. A HEALTHIER TOMORROW.

Cleaner Air | Emission Control | Greener Tomorrow

SOLUTIONS FOR A SUSTAINABLE WORLD
